Beginner Level - TASK 1

Iris Flowers Classification ML Project:

BY SHRIEENIDHI A M

This particular ML project is usually referred to as the “Hello World” of Machine Learning. The iris flowers dataset contains numeric attributes, and it is perfect for beginners to learn about supervised ML algorithms, mainly how to load and handle data. Also, since this is a small dataset, it can easily fit in memory without requiring special transformations or scaling capabilities.

Importing all the libraries

In [51]:
```
import pandas as pd
import matplotlib.pyplot as plt
get_ipython().run_line_magic('matplotlib', 'inline')
import seaborn as sns
from sklearn.preprocessing import StandardScaler
from sklearn.linear_model import LogisticRegression
from sklearn.svm import SVC
from sklearn.metrics import classification_report
from sklearn.model_selection import train_test_split
from sklearn.metrics import accuracy_score
from sklearn.metrics import confusion_matrix
```

Loading the dataset

In [52]:
```
df=pd.read_csv("Iris.csv")
df
```

Out[52]:

150 rows × 6 columns

In [53]:
```
df.head()
```

3	4	4.6	3.1	1.5	0.2	Iris-setosa
4	5	5.0	3.6	1.4	0.2	Iris-setosa

Getting the size of the dataset

In [54]:
```
data_size=df.shape
print(f"Number of rows :{data_size[0]}")
print(f"Number of columns :{data_size[1]}")
```

```
Number of rows :150
Number of columns :6
```

In [55]:
```
df.isnull().sum()
```

Out[55]:

Species          0
dtype: int64
```

Analyzing and visualizing the dataset

In [56]:
```
df.info()
```

```
<class 'pandas.core.frame.DataFrame'>
